BOND SECURE · 4:45

> Tab 1 home · Tab 2 /recover (empty) · Tab 3 claim pack PDF

> Zoom 125–150% · 3 PNGs + move-in PDF on desktop

> Slow down at **“36 days overdue”** and **“this is my room”**.

> If AI fails: **Show a demo result instead**.

1 · HOOK

0:00 · Tab 1 · look at the room

Hi, I'm Chiranth.

I'm an international student in Sydney.

I paid an **$802** deposit for my room.

The terms said: back within **15 days**.

Weeks later: *"still being processed."*

Five others in my building got the same email.

One student who tested my app waited **two months**...

and only got paid after threatening legal action.

1 · HOOK (cont.)

Half of international students rent privately.

Last year, about **6,800** bond disputes went to the NSW tribunal.

Most of us don't know which law applies,

if the deadline's passed, or what to send.

So I built **Bond Secure.**

2 · MEI'S RECEIPTS

0:45 · Tab 2

DRAG IN 3 FILES → READ 3 FILES

Meet Mei, an international student from China.

Mei's case is based on mine.

Mei drops in the receipt, the terms and the operator's email.

AI reads them: the company, the **$802**, the date paid, the **15-day promise**, the move-out date.

For every fact, it shows the **exact words** it read, so Mei can check it.

> Slow? “It never guesses. It quotes its source.”

> Fails? **SHOW A DEMO RESULT INSTEAD** · “Here's what it finds.”

3 · VERDICT

1:20

TICK USE THESE → NSW · COMPANY · 5 OR MORE · NO BOND NUMBER → SHOW ME WHERE I STAND

Mei confirms, and answers four plain questions.

Now the important part: this is **not** AI.

Tested rules decide the law.

Boarding Houses Act: 14 days.

Mei's refund is 36 days overdue.

PAUSE · point at the red badge

4 · SHOWS ITS WORKING

1:50

SCROLL TO HOW WE DECIDED

Legal information has to show its working:

the rule, the official source, the date we checked it.

If a student isn't sure, it doesn't guess.

It shows both answers and sends them to a free legal centre.

5 · CHINESE

2:15

READ THIS IN → 简体中文 → BACK TO ENGLISH

Mei can read all of this in Chinese.

The letter stays in English,

because that's what the operator and the tribunal read.

> Slow? Skip: “It also explains everything in Chinese.”

6 · DEMAND + EVIDENCE

2:30

SCROLL TO THE LETTER → TAB 3

Mei gets a formal demand that cites the law and the deadline.

A claim pack with a timeline, and a kit for **NCAT**, the NSW rental tribunal, if they still don't pay.

And this page: **“Already there when I moved in.”**

7 · MY ROOM

3:10 · Tab 3

These photos are real.

This is my room.

PAUSE

I filmed 56 seconds on move-in day and said what I saw.

AI watched every second and found every mark: blistered paint at **21 seconds**, mould at **28**.

The photos come from my own video, I confirm every line, and the report fingerprints the video, so it can't be swapped.

Months later, that PDF drops straight into the claim.

8 · PROOF

3:40 · Tab 1

SCROLL TO THE QUOTES

Four international students tried it cold.

For all four, it found every mark they pointed at.

All four said they'd send the letter.

Where they got stuck, we fixed it the same day.

AI does the seeing and reading.

Code makes the legal call.

The student confirms.

9 · CLOSE

4:15

Next: finding the real company behind the name, a lawyer's review, then every state.

Bond Secure takes students like Mei

from *“where do I even start?”*

to a formal demand, with proof,

in about ten minutes.

Thank you.

IF THEY ASK (1/2)

AI wrong? It shows its evidence, the student confirms every line, and the legal decision is code with 51 tests.

Legal advice? Legal information, every rule sourced, it never files anything, and it refers people to Redfern Legal Centre. A lawyer's review is next.

NCAT? The NSW tribunal for rental disputes. Cheap, no lawyer needed, and its orders are binding.

Privacy? No accounts, no database, video deleted after analysis. Google's free tier while testing, and the site says so.

IF THEY ASK (2/2)

Reach students? Uni international offices, student unions, legal centres, WhatsApp and WeChat groups.

Money? Free for students. Exploring universities and accommodation providers offering it, which is where the mentoring helps.

Why not other apps? Tenant apps are photo checklists. AI inspection tools are sold to landlords. This one's on the student's side.
