BOND SECURE · 1 · WHO IS IT FOR, AND HOW BIG IS THE PROBLEM?

International students lose bonds they're owed, because the rules are a maze.

Priya paid an **$802** deposit to a student accommodation company. Its terms promised a refund in 15 days. Seven weeks later: "still being processed". She has **no proof** of the room on day one, can't tell which of **4 NSW legal paths** applies, and doesn't know if a **deadline** has passed.

HOW THEY MANAGE TODAY

"didnt get my bond back, for 2 months.. until i threatened with legal notice"

International student who tested Bond Secure. Others wait, chase emails, or give up.

1 in 2

international students rent privately, vs 1 in 3 other Australians

6,800

bond disputes at the NSW tribunal in 2024: 1 in 4 private rental cases

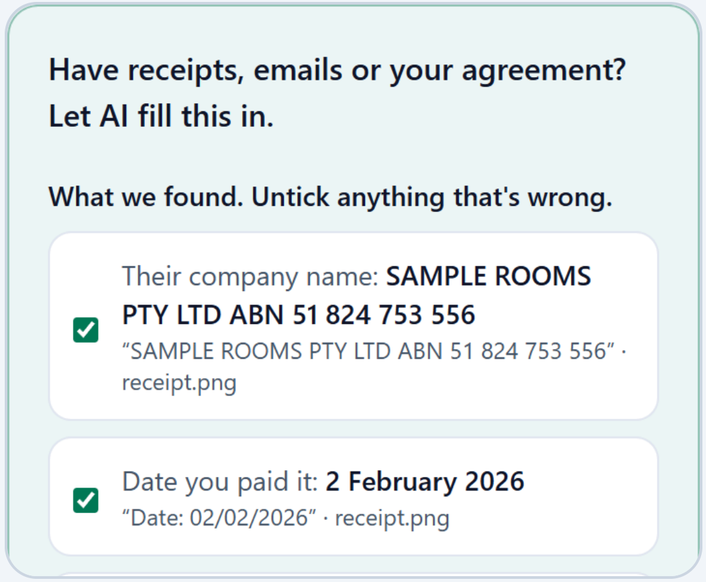

0 of 4

student testers knew exactly what to do. 3 had lost bond money themselves.

Sources: RBA Bulletin, Jul 2025 · Law and Justice Foundation of NSW, Jun 2025 · Bond Secure tester survey, Oct 2026 (n = 4)

BOND SECURE · 2 · WHAT CAN THEY DO NOW?

In 10 minutes: from "where do I even start?" to a formal demand that cites the law.

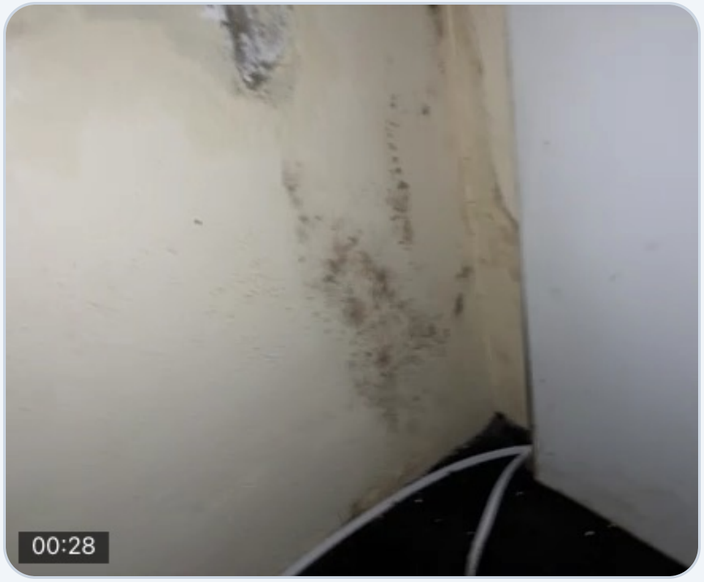

1 · AI reads their documents

Receipts, terms and emails become answers, each with the exact words it read.

2 · Tested rules decide

Which law, the deadline, how late they are. Then the letter and claim pack.

3 · Next room: AI checks the video

A narrated walk-through becomes proof: every mark, with the second it appears.

Screens from the live site (sample data). Still 3 is from the builder's own room. Free, no account. Legal information, not legal advice.

BOND SECURE · 3 · WHAT DID YOU LEARN?

Testing the law, the AI and real students each changed the product.

The law: 4 paths, not 1

We assumed one letter template would do. A student room can fall under 4 regimes with different deadlines, so tested code picks the path and shows "what if" when an answer is unsure.

The AI: accuracy over speed

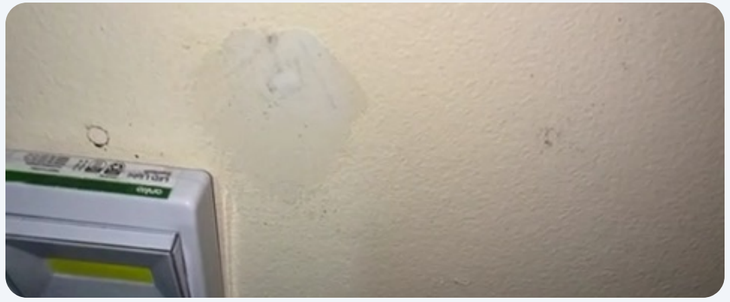

Less AI "thinking" was faster but missed marks, so we kept it. The AI times each mark when it first appears, so code picks the sharpest frame nearby.

4 students tried it cold

All 4: every mark found, would send the letter. Scored 9.3, 9.8 and 10 out of 10. Stuck on the wait and not knowing to talk, so we added both fixes below.

00:21 Blistered paint: found

00:41 Peeled paint by switch: found

Added after testers got stuck

Stills: the builder's real 56-second iPhone video, 5 of 5 correct. Testers: 4 international students, 10–11 Oct 2026.

BOND SECURE · 4 · WHAT IS REAL TODAY?

AI does the seeing and reading. Code makes the legal call. The student confirms.

AI · Google Gemini | CODE · tested rules | YOU · the student

Move-in day	YOU Film the room and talk	→	AI Lists every mark and its second	→	CODE Picks the sharpest still	→	YOU Confirm every line	→	CODE PDF with video fingerprint
Bond not back	YOU Add receipts and emails	→	AI Reads the facts, quoting each	→	YOU Confirm the answers	→	CODE Picks the law, counts days late	→	CODE Letter, claim pack, NCAT kit

Real and live today

- Every step above, end to end, on the live site
- Tested on a real room video and by 4 students
- 51 automated tests on the legal rules and PDFs

Simulated, or next

- Labelled demo mode if the AI is down
- Free AI tier while testing (disclosed); NSW only
- No lawyer review yet; it never files anything
- Next: real company name via ABN (key pending)
